

HP Chromebook 11 G3 SD Card Reader Module Replacement

How to replace the HP Chromebook 11 G3's SD card reader module.

Written By: Rahul Goyal

INTRODUCTION

This guide walks through replacing a faulty SD card reader module. It requires removing the keyboard mount. Afterwards, it is relatively simple and requires only a Phillips head screwdriver and a spudger to finish removal.

TOOLS:

- [iFixit Opening Tools](#) (1)
 - [Tweezers](#) (1)
 - [Phillips #00 Screwdriver](#) (1)
 - [Spudger](#) (1)
-

Step 1 — Keyboard Mount

- Flip the laptop upside down so that the lid lies flat on the table.
- Remove the nine 6mm Phillips #00 screws that line the border.

Step 2

- Remove the two rubber feet closest to the hinge using tweezers.
- Remove the two 6mm Phillips #00 screws revealed under these rubber feet.
- ⓘ The rubber feet may tear while removal; preventing this can be difficult, but it won't harm the laptop. If desired, replace these rubber feet during reassembly.

Step 3

- Flip the laptop so it is in the upright position.
- Open the lid.
- Unsnap the keyboard mount along the border of the laptop using a plastic opening tool.
- ⓘ This may require more force than expected. Hearing loud clicks as the plastic opening tool slides along the seam is normal.

Step 4

- Tilt the keyboard mount up.
- Use a spudger to flip up the two ZIF connector retaining flaps for the ribbon cables that connect the keyboard mount to the motherboard.
- Gently remove both ribbon cables.

Step 5

- Lift the keyboard mount out of the laptop.

Step 6 — SD Card Reader Module

- On the module, use a spudger to lift the small ZIF retaining flap for the ribbon cable connecting the SD card reader to the motherboard.
- Gently pull the ribbon cable out of its socket.

Step 7

- Remove the two Phillips #00 6mm screws that attach the module to the laptop.

Step 8

- Lift the module up and out of the laptop.

To reassemble your device, follow these instructions in reverse order.
